The Unwanted Souvenir:

# A Traveler's Guide to "Bali Belly"

Up to 60% of tourists visiting Bali and other tropical regions experience food poisoning and the so-called Bali Belly.

### What happens to the body:

- Sudden diarrhea and abdominal cramps
- Nausea, vomiting, fever
- Dehydration, weakness, body chills
- Dizziness and loss of strength
- Increased body temperature

### At the same time:

- Symptoms appear suddenly, often in unfamiliar surroundings
- People don't know where to turn — they call friends, seek help on social media, often from non-experts
- Medical assistance is not always fast or accessible, and in many cases can be very costly.

Any delay leads to increased dehydration, electrolyte loss, and risk of complications.

## A Simple Solution:

- 1 Morning Activation (250 ml):**  
Taken on an empty stomach to activate metabolism and your immune system for the day ahead.
- 2 Evening Recovery (250 ml):**  
Taken before bed to support deep cellular regeneration and improve sleep quality.

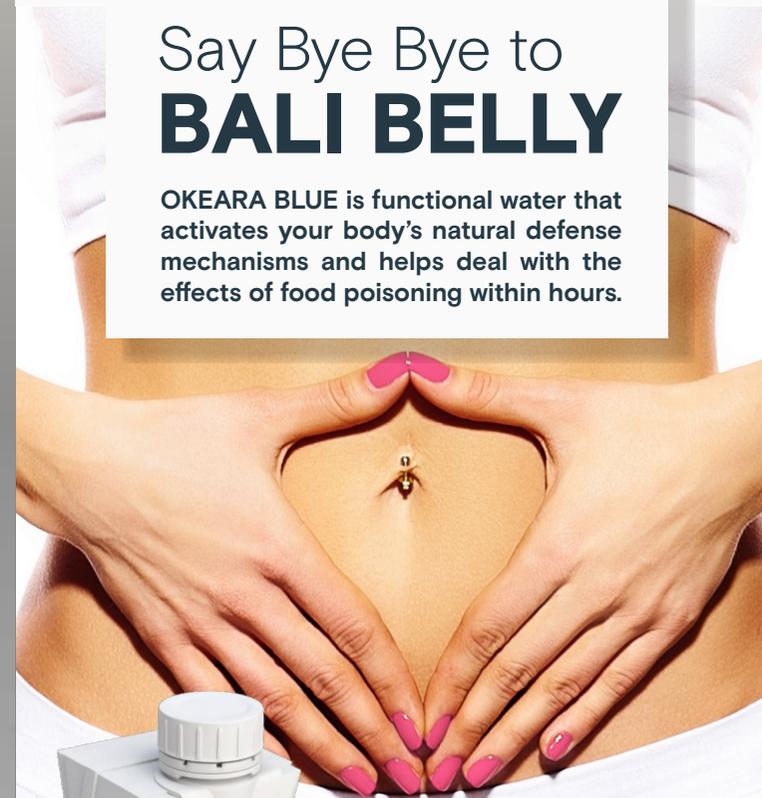

**Note:** If symptoms are severe, take double the amount on the first day. Afterwards, continue with 250 ml twice daily until you feel better.

## Your First Responder for "Bali Belly"

Think of OKEARA BLUE as your travel insurance in a bottle, ensuring your health and preserving every moment of your trip.

### How it works:

- The HOCl immune molecule is a natural antiseptic produced by leukocytes to neutralize pathogens and toxins
- Structured, purified water with reduced surface tension delivers HOCl deep into tissues and quickly to the problem area
- Activates the immune response, helping the body recover from poisoning and intoxication
- Restores the fluid and electrolyte balance, reducing spasms and weakness

## The Science of Your Inner Shield

The main problem is not only that the tropics are full of bacteria and viruses unfamiliar to us. The question is whether your body is ready to face them.

**If the immune system is weakened — any infection or food poisoning will be more severe, last longer, and carry a higher risk of complications.**

### Your Natural State: A Resilient Shield

In our youth, our immune system is at its peak. Our white blood cells produce an abundance of a powerful "combat molecule," HOCl, creating a vibrant, impenetrable shield against pathogens.

### The Modern Deficit: A Shield with Gaps

But with age, stress, and exposure to toxins, our body's natural production of HOCl declines. This shield develops gaps, leaving us more vulnerable to the very infections we used to fight off easily.

## What is OKEARA BLUE?

OKEARA BLUE is a functional beverage built around Hypochlorous Acid (HOCl) — the same intelligent molecule your own immune cells produce to defend gut health and neutralize pathogens. Delivered in a base of pure, structured water, it's a bio-identical formula designed to restore your body's natural resilience.
